

SEGGER's Ozone now available for macOS on the M1/M2 (Arm core) by popular demand

Monheim am Rhein, Germany – March 24th, 2023

SEGGER announces that its debugger and performance analyzer, Ozone, is now available for macOS running on Apple silicon (e.g. M1/M2).

“Based on numerous requests by customers and the popularity of the Apple silicon-based products, we decided to make a new build of Ozone available,“ says Dirk Akemann, Marketing Manager at SEGGER. “The Apple silicon builds for our J-Link debug probe and our development tools Embedded Studio and SystemView have been in constant high demand, so we decided to expand this to include Ozone.”

While the new build optimizes and unleashes the performance of macOS on the Apple silicon platform, the software has always been multi-platform, for 32 and 64-bit cores, both Intel and Arm.

Ozone is designed specifically for embedded applications and is well known for its blazing speed. More than a simple debugger, its various features, including trace, code profiling, and code coverage analysis, make it a powerful tool for getting full system insight, tracking down inefficiencies and bugs, and making products even better.

The user interface is designed to be used intuitively and is fully configurable. All windows can be moved, re-sized, and docked to fit the needs of any developer.

For more information on Ozone, please visit: www.segger.com/ozone

About SEGGER

SEGGER Microcontroller GmbH has three decades of experience in Embedded Systems, producing cutting-edge RTOS and Software Libraries, J-Link and J-Trace debug and trace probes, a line of Flasher In-System Programmers and software development tools.

SEGGER's all-in-one solution emPower OS provides an RTOS plus a complete spectrum of software libraries including communication, security, data compression and storage, user interface software and more. Using emPower OS gives developers a head start, benefiting from decades of experience in the industry.

SEGGER's professional embedded development software and tools are simple in design, optimized for embedded systems, and support the entire embedded system development process through affordable, high-quality, flexible and easy-to-use tools.

The company was founded by Rolf Segger in 1992, is privately held, and is growing steadily. SEGGER also has a U.S. office in the Boston area and branch operations in Silicon Valley, Shanghai and the UK, plus distributors on most continents, making SEGGER's full product range available worldwide.

For more information on SEGGER, please visit www.segger.com.

Why SEGGER?

In short, SEGGER has a full set of tools for embedded systems, offers support through the entire development process, and has decades of experience as the Embedded Experts.

In addition, SEGGER software is not covered by an open-source or required-attribution license and can be integrated in any commercial or proprietary product, without the obligation to disclose the combined source.

Finally, SEGGER offers stability in an often volatile industry, making SEGGER a very reliable partner for long-term relationships.
