It simply works!

SEGGER introduces J-Link WiFi, a new member of the J-Link family of debug probes

Monheim, Germany – October 28th, 2019

With USB and Wi-Fi interfaces, any software compatible with J-Link can easily use the new model.

Removing the physical connection between J-Link and the host opens up a world of new possibilities: A robot, vehicle, drone, or other devices with moving parts can be monitored or debugged on the move or from a distance. Physical disconnection provides the ultimate in electrical isolation where desired, and J-Link over Wi-Fi is perfect for accessing air-sealed environments.

The J-Link WiFi comes with Ozone, J-Flash, Monitor mode debugging, and unlimited flash breakpoints. It delivers a high download and debug speed that isn't possible with other options such as Bluetooth.

"For years we have had customers using our J-Link PRO in combination with a Wi-Fi bridge," says Alex Grüner, CTO at SEGGER. "Now, created by popular demand, we are very excited to release this new model, making J-Link debugging easily available for mobile applications. Customers can now do wireless debugging with the legendary speed and reliability of J-Link."

Just like the J-Link PRO, it comes with a built-in web server and can be accessed from any computer on the network or even outside using the J-Link Remote server.

About SEGGER

SEGGER Microcontroller has over twenty-five years of experience in Embedded Computer Systems, producing state-of-the-art software libraries, and offering a full set of hardware tools (for development and production) and software tools.

SEGGER provides an RTOS plus a complete spectrum of software libraries including communication, security, data compression and storage, user interface software and more. Using SEGGER software libraries gives developers a head start, benefiting from decades of experience in the industry.

SEGGER's professional software libraries and tools for Embedded System development are designed for simple usage and are optimized for the

requirements imposed by resource-constrained embedded systems. The company also supports the entire development process with affordable, high-quality, flexible, easy-to-use tools.

The company was founded by Rolf Segger in 1992, is privately held, and is growing steadily. SEGGER also has a U.S. office in the Boston area and branch operations in Silicon Valley and the UK, plus distributors on most continents, making SEGGER's full product range available worldwide.

Why SEGGER?

In short, SEGGER has a full set of tools for embedded systems, offers support through the entire development process, and has decades of experience as the Embedded Experts.

In addition, SEGGER software is not covered by an open-source or required-attribution license and can be integrated in any commercial or proprietary product, without the obligation to disclose the combined source.

Finally, SEGGER offers stability in an often volatile industry making SEGGER a very reliable partner for long-term relationships.
